

IDLE 1

MASTER BIBLE v1.1 - FROZEN FOR BUILD

Idle auto-battler + visible kingdom growth + hero gear + enormous army + async Alliance conquest

Canonical fingerprint

a5ba20db1ccc157207f7e4e90197a5a82b1b8fda10dce01ffffb2b3ee8cf5995

VERSION 1.1

STATUS FROZEN_FOR_BUILD

North star - Start with one warrior. End with a royal Lord in legendary gear leading an enormous army of soldiers, cavalry, siege engines, beasts, elephants and mythic units against monster hordes and giant bosses.

1. Product promise

IDLE 1 is a portrait-first mobile idle strategy RPG designed to be materially faster to build than Empire Lords Dragon while still feeling like a complete commercial game. The player alternates between watching automatic combat, improving the Lord, growing the Kingdom, expanding a personal Domain and participating in asynchronous social competition.

- continuous auto combat with visible kill rewards
- hero gear loot forge and visual equipment progression
- army growth from lone Lord to enormous mixed army
- visible kingdom growth
- personal domain expansion
- research and unit unlocks
- always-on idle events and dungeons
- 30-member alliances with chat
- 10v10 asynchronous alliance territory wars

Do not dilute - This is not a six-icon idle menu. Progress must be visible on the Lord, the army, the Kingdom and the Domain map.

2. Core loop

Loop	What the player sees	What progresses
Battle	Lord and army automatically fight monsters	XP, Gold, soft resources, gear, stage progress
Gear	New weapons/armor drop and visibly change the Lord	rarity, item level, affixes, Forge slots
Kingdom	Camp grows into Imperial Capital	resource production, queues, building/research gates
Army	New troop categories join the battlefield	13 units, command capacity, formation power
Domain	Heraldic territory expands every 2 stages	100 tiles and production bonus
Idle/Social	Offline chest, events, dungeons, Alliance wars	retention, materials, War Coins, territory

3. Campaign and monster world

The campaign contains 200 stages grouped into 10 visually distinct regions. Each stage has ten waves. Every fifth stage is Elite; every tenth is a Boss. The difficulty is server-authored by the canonical enemy-power curve, while the client turns the result into a cinematic auto-battle.

Region	Stages	Enemy examples	Boss
Green Marches	1-20	Goblin Raider, Road Bandit	Ogre Warlord
Blackwood	21-40	Dark Wolf, Forest Troll	Ancient Treant

Iron Hills	41-60	Orc Reaver, Armored Ogre	Mountain Tyrant
Ashen Plains	61-80	Ash Raider, Undead Legionary	Bone Colossus
Frost Crown	81-100	Frost Wolf, Ice Troll	Ice Giant King
Sunscar Desert	101-120	Giant Scorpion, Desert Marauder	Sand Wyrn
Drowned Coast	121-140	Drowned Soldier, Sea Troll	Leviathan
Dragonspine	141-160	Drake, Wyvern	Elder Dragon
Celestial Rift	161-180	Fallen Knight, Winged Horror	Fallen Seraph
End of Realms	181-200	Demon Legionary, Ancient Titan	World Devourer

Reward rule: 75% of XP, Gold and soft-resource reward is attributed across monster kills and 25% to stage clear. This makes every kill feel rewarding without requiring one server transaction per monster.

4. Hero XP, skills and talents

Hero levels are earned with XP only. There is no second Gold charge for leveling. XP to next level is $\text{round}(80 * \text{level}^{1.55} + 40 * \text{level})$. Clearing all 200 campaign stages once supplies about 66.73% of the XP required for level 100, placing the player around level 85 before repeat/offline/event XP.

Unlock	Skill	Function
5	power_strike	single-target burst
15	war_cry	temporary hero+army attack buff
30	shield_wall	temporary defense and damage reduction
45	rain_of_steel	area damage to monster wave
65	royal_strike	high boss damage
85	dragon_banner	brief army haste and mythic power buff

Three auto-skill slots unlock at Hero 10, 30 and 60. Talent points arrive every 5 levels. The player chooses among Warrior, Guardian, Commander and Fortune branches; respec costs 50 Rubies.

5. Gear, loot and visible equipment

Gear is mandatory in v1.1. The Lord has nine equipment slots: Weapon, Offhand, Helmet, Chest, Gloves, Boots, Cloak, Ring and Amulet. Weapon, Helmet, Chest, Boots and Cloak visibly change the battle character. Rarity progresses from Common to Ancient as the campaign advances.

Rarity	Unlock stage	Stat multiplier	Affixes
common	1	1.0	0
uncommon	10	1.18	1
rare	25	1.42	1

epic	50	1.75	2
legendary	90	2.2	3
mythic	140	2.8	4
ancient	180	3.6	4

Normal clear has a 12% gear roll, Elite 30%, Boss one guaranteed item plus a 25% extra roll. Milestone bosses 50/100/150/200 guarantee at least Epic/Legendary/Mythic/Ancient. Repeat farming halves normal gear drop probability to avoid inventory flooding.

6. Forge, salvage and reforge

Forge progression belongs to the equipment slot, not the item. If the player upgrades Weapon Forge to +12 and later finds a Legendary sword, the new sword immediately benefits from Weapon Forge +12. This makes upgrading feel safe and removes the common idle frustration of wasting materials on replaced gear.

Item level	Gold +0->+20	Forge Dust +0->+20
10	120,982	678
50	489,690	1,438
100	950,574	2,390

Forge never fails. Unwanted items are salvaged into Forge Dust; high rarities may yield Reforge Stones/Mythic Essence. Reforge changes one selected secondary affix and cannot reduce rarity or primary stats. Auto Equip is free. Auto Salvage unlocks at stage 20.

7. Army progression: from one man to an imperial host

The army is both gameplay and spectacle. The Lord fights alone before stage 10. As research, Castle and Campaign gates open, recruited units enter the formation and visibly join the battlefield. Real counts are stored on the server; rendering uses representative cohorts so late game can look enormous without destroying mobile performance.

Tier	Trigger	Foreground cap	Visual read
0	stage < 10	1	Lord fights alone
1	stage >= 10 and army deployed	10	small infantry escort
2	stage >= 20	20	infantry and archers with banners
3	stage >= 40	32	cavalry joins; visible formation depth
4	stage >= 60	48	siege engines and dense troop lines
5	stage >= 90	68	beasts appear among regular troops
6	stage >= 120	90	war elephants, multiple banners, wide army frontage

7	stage >= 140	110	mythic units join and the army fills the battlefield
8	stage >= 180	120	imperial host: thousands perceived through LOD cohorts, banners, siege, beasts and multiple mythic silhouettes

Late-game requirement - At stage 180+ the player must see a wide imperial host with regular infantry, archers, cavalry, siege, beasts, elephants, multiple banners and mythic silhouettes attacking monster hordes or a giant boss. It must feel like thousands of troops even though the renderer uses at most 120 foreground proxies on high-end devices.

8. Unit unlocks and formation

All 13 Empire-universe unit families are retained, but IDLE 1 uses simpler recruitment/formation rules. A unit is recruitable only when its Castle, Research and Campaign-stage gates all pass. Command capacity is $50 + \text{hero_level} * 10 + \text{castle_level}^2 * 20$.

Unit	Stage	Castle	Command	Role
Fanteria	10	1	1	frontline
Arciere	20	3	1	ranged
Cavalleria	40	5	3	mobile
Catapulta	60	7	8	siege
Carro di Conquista	80	9	12	domain
Orso	100	10	4	frontline
Lupo	90	10	2	mobile
Leone	110	11	4	assault
Falco	105	11	2	scout
Elefante da Guerra	120	12	10	heavy
Drago	140	14	25	legendary
Angelo	160	16	25	legendary
Demone	180	18	25	legendary

9. Kingdom growth

The Kingdom remains a major emotional reward. Castle levels 1-20 map into seven distinct visual tiers from Accampamento del Lord to Capitale Imperiale. New walls, streets, buildings, banners, population and landmarks must appear; the city cannot merely scale the same model.

Tier	Castle levels	Name	Visual
1	1-3	Accampamento del Lord	tende, falo, capanna centrale, palizzata minima, 1 bandiera
2	4-6	Villaggio Fortificato	case in legno, palizzata completa, fattorie, torre di guardia, strade sterrate
3	7-9	Borgo di Frontiera	primi edifici in pietra, mura basse, caserma, mercato, torri angolari
4	10-12	Citta Murata	mura in pietra, mastio, quartieri, scuderia, officina, maggiore popolazione
5	13-15	Grande Fortezza	doppie mura, torri alte, ponte, bestiario, tempio, stendardi nobiliari
6	16-19	Citta Reale	castello monumentale, piazze, quartieri ricchi, cupole/torri, traffico e dettagli ambientali
7	20	Capitale Imperiale	cittadella enorme, mura multilivello, monumenti, santuario mitico, drappi, effetti magici discreti

10. Buildings, research and resources

The v1.0 foundation is retained: 16 buildings, five core soft resources and 48 research nodes with five levels each. Battle rewards now supplement - not replace - economic buildings. Personal Domain ownership adds +5% production per 10 owned tiles up to +50%.

Exact per-level building and research costs/times remain in CANONICAL_SPEC. The builder must never summarize these into guessed curves at runtime.

11. Personal Domain

The personal 10x10 map starts with one owned tile. Every two cleared campaign stages claims one canonical adjacent tile until all 100 are owned at stage 200. Roads, farms, towers, villages, forts and city silhouettes accumulate so the map becomes visibly denser and more imperial.

12. Offline progression

The server calculates elapsed time using server timestamps. The offline chest holds up to 12 hours. It includes production, repeat-stage XP/Gold/soft resources, limited gear rolls and completed construction/research/recruitment timers. The device clock is never trusted and each claim is idempotent.

13. Dungeons, events and retention

Four 10-minute idle dungeons unlock progressively with 10 tiers. Each gives two free entries per day; up to three extra entries per dungeon cost 25 Rubies each. Weekly events remain always active through a rotating event archetype and offer Energy refills, instant finish and Event Pass purchases.

Dungeon	Primary reward
Royal Treasury	Gold plus soft resources
Forge Depths	Forge Dust + Reforge Stones
Ancient Ruins	Gear roll + Mythic Essence at high tier
Monster Hunt	Hero XP + Event Tokens

Daily tasks provide 10 Rubies total, weekly tasks 50 Rubies, and the 7-day login cycle 35 Rubies plus a boosted gear roll. Forty achievements and a Codex add long-term one-time goals.

14. Alliance, chat and Alliance Boss

Alliances unlock at Castle 8, cost 5,000 Gold to create and hold up to 30 members. Chat channels: Global, Alliance, War and System Feed. Direct messages remain out of scope. Report, block, mute and moderation are mandatory.

Titan Hunt is a 48-hour asynchronous Alliance Boss. Each member receives three free attacks per day; up to three extra attacks cost 50 Rubies each. It rewards War Coins, Forge materials and cosmetic progression but does not directly change territory.

15. Asynchronous 10v10 territory war

Alliance War remains a 10v10 asynchronous system on a 19x19 competitive map. One adjacent territory is attacked, eight hours of preparation run, and ten deterministic lanes resolve. The complete Hero/Gear/Forge/Talent/Army/Research snapshot freezes 30 minutes before resolution.

Competitive integrity - Anything purchased or upgraded after roster lock does not change that war. This keeps monetization active without allowing a last-second payment to rewrite an already locked battle.

16. Economy and balance controls

Metric	v1.1 audited value
Hero XP 1->100	4,097,345
Campaign first-clear XP	2,734,254 (66.73%)
Approx level after 200 first clears	85
Campaign first-clear Gold	1,046,199
Campaign first-clear soft bundle	574,560
Late offline farm at stage 200	~33,537 XP/h, 29,103 Gold/h

Target F2P pacing: Castle 5 first day; Castle 10 days 2-5; Castle 14 week 1-2; Castle 17 week 2-3; Castle 20 week 4-6. Campaign 200 roughly weeks 3-6. These targets are for telemetry comparison; hidden dynamic difficulty is forbidden.

17. Monetization

Monetization is pay-to-accelerate and cosmetic, not paid random gear. Products: Ruby packs, Starter Bundle, weekly Event Pass, 28-day Season Pass, resource crates, dungeon entries, event Energy refills, Alliance Boss extra attacks and cosmetics. Production UI must display store-localized prices returned by Apple/Google.

No paid loot boxes/gacha. No item can be bought from a random gear chest. Persistent acceleration can improve a future roster, but a locked Alliance War snapshot cannot be modified.

18. Account, privacy and payments

iOS and Android use the same account and backend state. Required: email/password, Google, Sign in with Apple, verification, recovery, logout-all, export request, in-app account deletion, Privacy/Terms, consent configuration, secure token storage, StoreKit/Play Billing verification, restore purchases and refund/revocation reconciliation.

19. Premium medieval-fantasy art direction

The game must look like a premium medieval-fantasy product, not a SaaS interface. Use parchment, stone, wood, forged iron, bronze, antique gold, leather, velvet and heraldry. The hero gear, army size, Kingdom and Domain must all communicate progression at a glance.

Forbidden - Cyberpunk, sci-fi, neon technology, generic admin-dashboard cards, chibi style, slot-machine loot presentation and placeholders presented as final art.

20. Architecture and security

React + TypeScript + Capacitor client; Python/FastAPI/Pydantic backend; MongoDB production persistence. Server authority covers combat outcomes, rewards, loot rolls, timers, offline claims, territory, purchases and war snapshots. Critical mutations use transactions or crash-safe state machines and idempotency is reserved before side effects.

21. Implementation plan I01-I16

Block	Name	Completion gate
I01	Account, privacy, secure auth, cloud profile	Create/login/recover/delete/export works; secure storage and policy screens complete
I02	Canonical runtime loader and Mongo domain foundation	All runtime numbers load from v1.1 spec/config; world/player persistence and idempotency foundation pass tests

I03	Campaign auto-combat and monster regions	200 stages, 10 regions, waves/elites/bosses, kill rewards and deterministic server outcomes work E2E
I04	Hero XP, skills and talents	Level 1-100 curve, 3 skill slots, talent points/respec and combat stats work E2E
I05	Gear, inventory, drops, salvage, forge, reforge	9 slots, rarity tables, drop rolls, auto-salvage/equip and slot forge +0..20 work E2E
I06	Kingdom, buildings, production and timers	20 Castle levels, 7 visual tiers, buildings/resources/queues and offline timers work E2E
I07	Research and army recruitment	48x5 research, 13 units, unlock gates, command capacity and formation work E2E
I08	Army spectacle renderer	Visual tiers 0-8 scale from Lord alone to huge army within mobile performance budgets
I09	Personal Domain	10x10 domain, one tile every 2 stages, visual growth and production bonuses work E2E
I10	Offline progression	12h server-timestamp loot/resources/gear/timers; double-claim and clock abuse tests pass
I11	Events, dungeons, quests, achievements and codex	Always-on event loop, spend hooks, four idle dungeons and retention systems work E2E
I12	Alliances, chat and moderation	30-member alliances, roles, Global/Alliance/War/System chat, report/block/mute work E2E
I13	Async 10v10 territory war and Alliance Boss	19x19 season map, roster snapshot, 10 lanes, territory capture, Titan Hunt and rewards work E2E
I14	Store, Apple/Google payments and restore/refunds	Localized store products, receipt verification, idempotent crediting, restore and refund reconciliation pass sandbox tests
I15	Mobile shells, push, performance and visual polish	iOS/Android same account/state; push/deep-links; target FPS and in-game visual QA pass
I16	Final security, economy regression and release audit	Zero P0/P1; economy invariants, concurrency/idempotency, E2E and release checklist pass

22. Release and QA gates

- Unit, schema, contract, integration, Mongo, concurrency, idempotency, frontend and mobile E2E tests.
- Clock-abuse and double offline-claim regression tests.
- Gear drop-table statistical test, salvage/forge/reforge cost invariants and inventory race tests.

- Apple/Google purchase sandbox, duplicate receipt, restore and refund/revocation tests.
- War snapshot immutability and atomic territory capture tests.
- Visual regression at Battle Tier 0, 4 and 8; Kingdom Tier 1 and 7; early/late Domain.
- Performance test at 120 high-end / 60 low-end battle proxies with background cohorts.
- Zero open P0/P1 before production-candidate claim.

23. Frozen scope and canonical fingerprint

v1.1 is deliberately complete but smaller than Empire Lords Dragon. Do not add manual combat, live synchronous world movement, direct messages, gacha, player gear trading or a free-camera 3D city builder without a new canonical version.

Canonical fingerprint - SPEC_HASH =

a5ba20db1ccc157207f7e4e90197a5a82b1b8fda10dce01ffffb2b3ee8cf5995

VERSION = 1.1

STATUS = FROZEN_FOR_BUILD

CANONICAL_SPEC v1.1 contains every exact runtime table/formula. If Emergent cannot parse JSON reliably, upload the READABLE file or all four FLAT parts as transport representations. They do not change authority.
